

PIXELAPES

design & development

Improve customer experience with a faster website.

We are now offering a collection of hosting add-ons that will help **increase the speed and security of your website.**

We have fine tuned your hosting account as much as possible to ensure the best performance but until recently some factors were beyond our control. We are now offering an opportunity to substantially speed up your website and further increase security.

We have partnered with two of the most respected names for website security and speed: [CloudFlare](#) and [MaxCDN](#). The benefit of our partnership with these two companies is that we can offer their services to you at a **significantly lower cost.**

What you get

Performance and security	Your website is automatically optimised to make it faster and known malicious visitors are diverted, helping to keep you safe and to maximise the available resources for real customers.
Global reach	No matter where your customers are located data is delivered by a server that's physically located close to them, ensuring that content is delivered in a fraction of a second.
Boost your WordPress	If your website is powered by WordPress we can apply special optimisation techniques which will substantially improve your website speed.
Significant savings	Due to our partnership with the CloudFlare and MaxCDN we pass on significant savings over the cost of independently subscribing to these services.
Hassle Free	We take care of all the setup and save you from needing to know the technical requirements. And of course we are always available to answer any questions you may have.

How does it work?

All you need to do is request the add-ons you wish to have applied to your hosting account and we'll get to work.

Before setting up anything we will take a measurement of your current website speed. We then enable the services you've requested and once all services are fully enabled we'll take another website speed measurement to show you the speed boost results.

What does it cost?

Below is a table detailing the cost of each service and we also show what these services would cost if you signed up to them directly with your own account.

Service	Original Price	PixelApes Price ¹
CloudFlare Pro	€14.50/month ²	€7/month
MaxCDN	€6.70/month ³	€4/month
CloudFlare & MaxCDN	€21.20/month	€10/month
WordPress Caching	N/A	€110 one-time setup ⁴

¹ All prices listed exclude Irish VAT at 23%.

² The CloudFlare Pro plan bought individually would cost \$20 per month.

³ MaxCDN basic plan starts at \$9 per month for 100GB bandwidth usage.

⁴ If you currently have a maintenance package, we can implement WordPress caching and just subtract 2 hours from your available hours.

What are these services?

CloudFlare

CloudFlare offers a unique system which both protects your website from unwanted visitors, and improves the loading and response times of your website.

Once your website is setup, visitors are routed through a global network which automatically optimises the delivery of your web pages. Visitors get the fastest page load times and best performance. CloudFlare also block threats and limits abusive bots and crawlers from wasting your bandwidth and server resources.

Result: Your website sees significant performance boosts and a decrease in spam.

MaxCDN

MaxCDN is a content distribution network who have over 600+ partners worldwide in over 90 countries. This means a visitor to your website will actually download content such as images and scripts from a web server very near them- resulting in a huge speed boost.

Result: Your website loads much faster to visitors from any location.

CloudFlare and MaxCDN Bundled

Put together, these two add-ons give great security and incredible speed. Meaning that wherever your customers are based, your website will load for them with lightning speed!

WordPress Caching

Does your website run on WordPress? If so, for a once off fee we can install and configure a powerful caching plugin which will optimise your website performance extensively.

Once W3 Total Cache is installed and configured, the normal queries that are made when loading your website are replaced by faster cached queries. In addition, the code on your website is minimised to reduce the amount of data downloaded by each visitor, resulting in much faster load times on both desktop and mobile devices.

Result: Substantially improve page load times for websites run on WordPress.
